Help Cure Cancer

April 19, 2007

Dear Colleague:

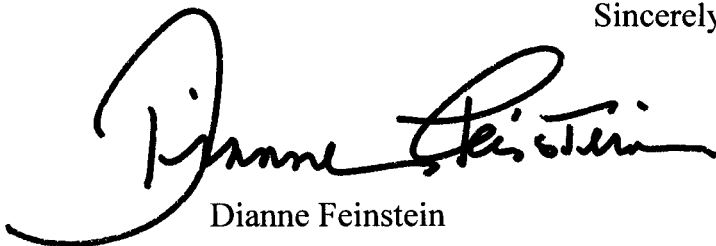

We ask you to join us in sending the attached letter to Senators Harkin and Specter in support of a 6.7 percent increase in funding for the National Cancer Institute (NCI).

Previous investments in research have allowed us to make significant progress in the fight against cancer. Today, 65 percent of people diagnosed with cancer can expect to survive at least five years, and cancer related deaths have now declined for two consecutive years. Sadly, this success has not been seen with all cancers. Those who are diagnosed with pancreatic and lung cancer, for example, have seen little change in survival rates. In addition, the burden of cancer remains enormous, accounting for one out of every four deaths in the United States, and costing our economy over \$200 billion annually.

Without a renewed investment in research, we risk substantially slowing the progress made in recent years. Now is the time to move forward and provide researchers with the funding necessary to make the next big discoveries. Supporting a 6.7 percent increase in NCI funding will put us back on the path to doubling the budget and will account for biomedical inflation. It also will allow for continued research and progress in the fight against cancer.

As recent news reports have demonstrated, cancer does not discriminate. It can touch all Americans, regardless of age, race or background. We urge you to join us in supporting the funding needed for continued progress against this terrible disease. If you would like to sign the letter, please contact Elizabeth Ziegler in Senator Feinstein's office at 224-4831, or Jill Canino in Senator Smith's office at 224-8699 by April 26, 2007.

Sincerely,

Dianne Feinstein

Gordon H. Smith

Washington, D.C. 20510

The Honorable Arlen Specter, Ranking Member
Senate Appropriations Subcommittee on
Labor, Health and Human Services,
Education, and Related Agencies
United States Senate
156 Dirksen Senate Office Building
Washington, D.C. 20510

Dear Chairman Harkin and Senator Specter:

We are writing today to urge the Labor, Health and Human Services, Education, and Related Agencies (LHHS) Appropriations Subcommittee to provide the National Cancer Institute (NCI) with a 6.7 percent funding increase for fiscal year (FY) 2008. This increase will provide critical resources to advance the fight against the over two hundred types of cancer.

We strongly support biomedical research and the great promise it holds in the development of new treatments and possible cures for the many types of cancer. Past investments at the NCI have helped drive new discoveries that led to the decline in overall cancer deaths in the U.S. for the second consecutive year. Now is the time to expand our efforts in the fight against this devastating disease.

Sadly, there are still far too many people for whom this progress has been inadequate. Individuals fighting lung and pancreatic cancer continue to face discouragingly low odds of survival. In 1975, the five year survival rates for lung and pancreatic cancer were 13 and two percent, respectively. Twenty-five years later, survival rates remain at unacceptable levels of 16 and five percent, making these cancers the first and fourth leading causes of cancer related deaths. Indeed, pancreatic cancer is considered the deadliest cancer, of which 75 percent of patients diagnosed with this disease die within the first year and most within the first three to six months. Early detection tools, such as those that currently are available for ovarian, colon, breast and prostate cancer, would make a significant impact on this disease, but those tools require a new investment in basic scientific research at the NCI.

In recent years, funding for cancer research has fallen behind the promise made during the campaign to double the budget for the National Institutes for Health (NIH). When NIH funding was first doubled, success rates for first submissions of grant requests to the NCI were 30 percent overall and 15 percent for new investigators. Those rates have now dropped to an average of 20 percent overall and five percent for new investigators. We are anticipating cuts to other NCI programs that advance research, such as the Specialized Programs of Research Excellence program, which provides vital opportunities to explore new areas of research.

We cannot afford to let this trend continue. There must be new investment to see true progress in the most lethal cancers, as well as the many other types of cancer research where funding has fallen short. Meanwhile, it is vital to ensure the continued progress in research of all cancers, including breast, prostate and colon.

We respectfully request that you support a FY08 LHHS bill that will provide the NCI with a 6.7 percent increase over the FY07 level to allow for continued progress in the fight against cancer.

Sincerely,
