ALEXANDRIA, Va. – The Conquer Cancer Foundation, the philanthropic arm of the American Society of Clinical Oncology (ASCO), has received a grant of nearly half a million dollars from the Stavros Niarchos Foundation to enhance the quality of cancer care available in select underserved communities over the next three years.

ASCO’s Quality Training Program and Quality Oncology Practice Initiative (QOPI®) will serve as the foundation for quality improvement and support in four selected communities in Atlanta, Dallas, Fort Worth and New York. Chosen for their commitment to caring for underserved populations as well as their willingness and commitment to engage in quality improvement, one oncology practice in each of these four communities has been selected to participate in this quality improvement opportunity. Participation will be supported by the Conquer Cancer Foundation through the Stavros Niarchos Foundation grant.

“AsCO continuously strives to reduce disparities in cancer care and one of the ways we do so is by improving access to high quality care,” said ASCO President Julie M. Vose, MD, MBA, FASCO. “This support from the Stavros Niarchos Foundation will enable ASCO to bring the Quality Training Program, QOPI and its additional quality improvement resources to four oncology practices that would otherwise not have the financial resources to participate in these programs.”

As part of the grant, practices will receive an on-site assessment, assistance in identifying achievable improvements, targeted toolkits, and hands-on quality improvement training. They will each partner with a mentor practice that will assist with specific areas of quality improvement. Outcomes of the project will be reported at the ASCO Annual Meeting, the Quality Care Symposium and in the Journal of Oncology Practice. The four participating practices are:

- Georgia Cancer Center for Excellence at Grady Health System – Atlanta, Ga.
- Ralph Lauren Center for Cancer Care and Prevention – New York, N.Y.
- Parkland Health and Hospital System – Dallas, Texas
- JPS Health Network Center for Cancer Care – Fort Worth, Texas

“Improving the quality of health care services, as well as access to those services, are important elements in
the Stavros Niarchos Foundation’s health grantmaking efforts,” said Roula Siklas, Program Coordinator for Health and Sports at SNF. “This program addresses both of these issues by supporting clinicians to maximize their resources in order to deliver the best care, and to share those learnings and best practices with the larger community of cancer care providers and ultimately with cancer patients across the nation.”

ASCO’s Quality Training Program is a structured initiative based in improvement science. This six-month structured education and training program is based on improvement science, focusing on process analysis, rapid cycle improvement, quantitative and qualitative methods, and creating and managing effective teams.

QOPI is an oncologist-led, practice-based quality assessment program designed to promote excellence in cancer care by helping practices create a culture of self-examination and improvement. QOPI provides a standard methodology, robust library of quality metrics for oncology, and a collection tool to reliably and routinely assess care, inform quality improvement activities, and demonstrate quality to patients and external stakeholders. Early adopters of QOPI are well-positioned to meet external reporting requirements for payers and the government and participate in new payment models focused on quality.

**About ASCO:**

Founded in 1964, the American Society of Clinical Oncology (ASCO) is the world’s leading professional organization representing physicians who care for people with cancer. With nearly 40,000 members, ASCO is committed to improving cancer care through scientific meetings, educational programs and peer-reviewed journals. ASCO is supported by its affiliate organization, the Conquer Cancer Foundation, which funds ground-breaking research and programs that make a tangible difference in the lives of people with cancer. For ASCO information and resources, visit [www.asco.org](http://www.asco.org). Patient-oriented cancer information is available at [www.cancer.net](http://www.cancer.net).
