

Treatment Algorithm for Lung Cancer Surveillance After Definitive Curative Intent Therapy

Note:

- These recommendations apply to patients with curatively treated stage I-III NSCLC and SCLC with no clinical suspicion of recurrent disease. This includes patients treated with surgery, stereotactic body radiotherapy, and chemoradiation.
- They also pertain only to routine surveillance strategies. Imaging to evaluate symptoms and follow up on previous findings is not addressed in this algorithm.
- These recommendations do not address the frequency of the clinical evaluation (history and physical examination) for either the suspicion of recurrence and/or to provide reassurance.

ASCO® Guidelines

This algorithm is derived from recommendations in Lung Cancer Surveillance After Definitive Curative-Intent Therapy: ASCO Guideline. This is a tool based on an ASCO guideline and is not intended to substitute for the independent professional judgment of the treating physician. Practice guidelines do not account for individual variation among patients. This tool does not purport to suggest any particular course of medical treatment. Use of the guideline and this tool are voluntary.
